

A WORKING INDEX OF AI PROJECTS

Things you can build, run, and ship — to actually understand how AI works.

Q Search projects, tools, techniques

09

All RAG Agents Chatbots Fine-tuning Vision Speech Au

09 PROJECTS

All Beginner Intermediate Advanced

Document Q&A with citations • Beginner

01

Chunk PDFs, embed, retrieve, and answer grounded in your own sources — runs fully local.

Python

LangChain

Chroma

~3h

6 steps

An agent that uses tools • Advanced

02

Build a ReAct loop that calls search, a calculator, and APIs, with tool routing you control.

Python

OpenAI

~5h

8 steps

Deploy a streaming chatbot • Beginner

03

A chat UI with streaming output and memory, shipped live with a single command.

Next.js

Vercel

~2h

5 steps

Fine-tune a small model • Advanced

04

Prepare a dataset, train with LoRA, and evaluate intent classification accuracy.

PyTorch

PEFT

~6h

9 steps

A multimodal vision assistant • Intermediate

05

Wire up a vision model for screenshot Q&A, chart reading, and OCR — wrapped as an API.

VLM

FastAPI

~4h

7 steps

Transcribe & summarize meetings • Intermediate

06

Transcribe audio with Whisper, then turn it into structured notes and action items.

Whisper

Python

~3h

6 steps

Automate a repetitive workflow • Beginner

07

Chain scrape, summarize, and notify into one scheduled flow — no heavy backend.

n8n

Webhook

~2h

5 steps

Semantic search over your docs • Intermediate

08

Compare keyword vs. vector retrieval, add reranking, and deploy it as a service.

Embeddings

Qdrant

~4h

7 steps

Build a prompt eval set • Intermediate

09

Create a graded test set and scoring rules to compare prompts and models quantitatively.

Python

Pytest

~3h

6 steps
